

Empowering through diagnosis.

Re:Cognition Health is a pioneering brain & mind clinic providing diagnostics, developmental programmes and a bespoke multidisciplinary service to clinically evaluate and manage underlying medical difficulties. The team are leading providers in evidence-based intervention and play-based therapies for children with autism.

We are passionate about supporting each individual to reach their fullest potential:

Early Start Denver Model (ESDM)

A play-based 12-week programme designed for parents of infants and toddlers with autism (1 to 2 years). ESDM is designed to enhance language, social communication, imitation, joint attention, play, and motor & self-care skills.

Paediatric Autism Communication Therapy (PACT)

For children aged 2 – 10 years sessions consist of parent/carer-led video feedback intervention.

Parents/carers work with the certified therapist in the clinic and apply the play principles with their child at home.
